

Evacuation Slides - Bottle Filling Station

>EVS1-BFS<

Filling station

Cooling unit

Nitrogen compressor

The station is developed for high pressure filling of Evacuation Slides Reservoir Assemblies with defined N₂ / CO₂-proportion.

By this procedure, accelerated and secure filling can be achieved, e.g.: 360in³ Reservoir Assembly with 1.04kg CO₂ and 1.04kg N₂, refillable in approx. 5 minutes

- > Filling of both media (nitrogen and carbon dioxide) is possible with one device and one filling connection
- > No cooling for the Reservoir Assemblies required
- > Supply possible with commercial gas CO₂; no unstable fluid lines necessary
- > High safety level for the operator; separately protected filling room
- > Fully automatic and half-automatic filling (step-wise) possible

GENERAL INFORMATION

- > A weighing platform is integrated with stainless steel adaption and hose securing
- > In addition, an external filling bar is provided for flexible filling procedure of nitrogen or for optional tasks with nitrogen (pressure regulated)
- > A safety shutdown is performed at exceeding the filling parameters
- > The set up process, which must be carried out, is queried once again when starting the filling procedure
- > Parameter monitoring and control of the filling procedure is automatically done by the equipment
- > Filling parameters can be set separately for each medium via touch panel
- > Switch off criteria can be selected (pressure or filling amount)
- > Sequences of the media to fill are freely selectable (e.g. N₂+CO₂+N₂... or CO₂+N₂+CO₂... etc.)
- > Also single fillings of CO₂ or N₂ are possible
- > Terminal parameters can be stored for each P/N after filling procedure

Filling room with weighing platforms and stainless steel adaptations

External filling bar

OPTIONS

A wide range of options is available to fulfil our customers' requirements.
e.g.: store filling recipes and access for each P/N, requirement to filling program, dimensioning,...
