

TEST-FUCHS GOES GREEN FUTURE

Sustainable mobil@TEST-FUCHS

Pool Cars/E-Cars: The green potential is also being utilised in the TEST-FUCHS vehicle fleet: A quarter of the vehicles are already electric. These are used predominantly for flexible and climate-friendly journeys between the headquarters in Groß-Siegharts and the site in Vienna. The 9 company-owned charging points guarantee unlimited mobility, powered by renewable energy from the extensive PV system on the roof of the company building.

Chargers: A total of 9 charging points for electric vehicles are available to TEST-FUCHS employees and guests right next to the headquarters in Groß-Siegharts. Two of these can also be used by the public. Powered by solar energy, they enable climate-friendly mobility.
