

> Training

- > We offer trainings in two steps for all TEST-FUCHS test systems
- > The basic training is mandatory for an advanced training
- > Training certificates for all participants
- > Trainings are available at the TEST-FUCHS locations or at the customer's premises
- > Individual update trainings

OPERATOR TRAINING

> Basic:	> Advanced:
Functional range and buildup of the equipment, installation of a UUT (unit under test), start and manual operation of the equipment	Manual operation according to UUT specific test-procedures, operation in automatic mode (depending on the automation level of the system), training for remote support

MAINTENANCE TRAINING

> Basic:	> Advanced:
Knowledge about the components of the test system, correct handling of the technical documentation, performance of a yearly maintenance	Troubleshooting, manual operation of the test system, remote support, comprehension of hydraulic and electric diagrams, failure codes, analysing of logfiles

SOFTWARE TRAINING

> Basic:	> Advanced:
Functional range of the software, comprehension of existing test sequences, changing of parameters and the test report, creating back-up files, remote support	Administration of users, generating new test sequences and reports, programming commands, working with conditions, loops, containers and variables from sub-sequences, generating user interfaces

CALIBRATION TRAINING

> Basic (theory):	> Advanced (practical training):
Calibration in general, norms and regulations, measurement units, calibration of TEST-FUCHS test systems	Calibration software, installation of the calibration equipment, calibrating and adjusting of the transducer characteristics, generating calibration reports

CLEARING

> Contact:	> Contracts:	> Location:
support@test-fuchs.com	Maintenance contract Support time package Service on demand	Customer's premises TEST-FUCHS headquarters TEST-FUCHS service location
